PrimaCite

From hours of searching to minutes.

PrimaCite is an AI assistant that saves busy doctors and pharmacists time. It searches and synthesises the clinical literature in minutes and, on request, drafts professional documents: literature reviews, PowerPoint presentations, SOPs and more.

*PrimaCite follows three principles: **Trust, but verify. Truly medical. Evidence, not guesswork.***

Autoreview. Cross-check. Board meeting.

Key points

PrimaCite checks each answer before the doctor reads it, at the level the doctor chooses. Autoreview checks it against the cited evidence, Cross-check uses a second, independent model, and Board meeting adds specialist perspectives simulated by PrimaCite.

- Autoreview: the answer is re-read against the cited evidence.
- Cross-check: a second, independent model reviews the answer.
- Board meeting: PrimaCite simulates a multispecialty discussion, with a moderator summarising the conclusions.

Trust, but verify.

Answer review

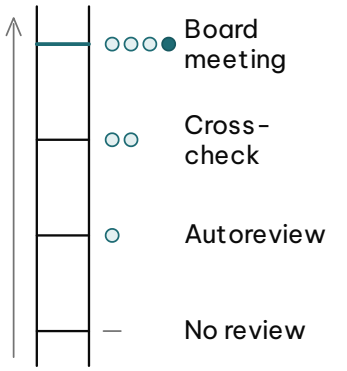

Figure 1. Review levels you choose per answer.

You choose the review level for the reliability you need: the deeper the review, the more thoroughly the answer is checked, and the longer it takes.

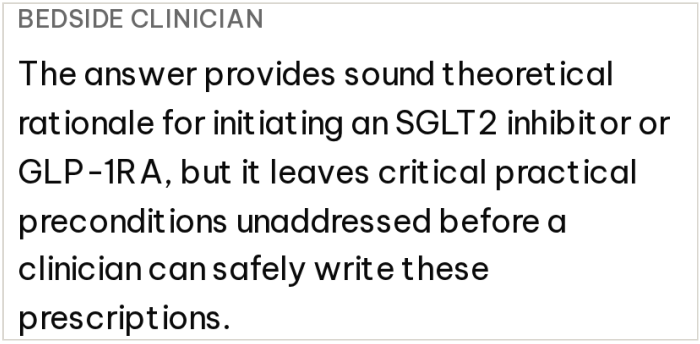

Figure 2. Board meeting: PrimaCite simulates specialist perspectives and the moderator's concluding summary. Real product screenshot, captured 2026-10-08.

Truly medical.

Writes like a fellow physician

PrimaCite answers the way one doctor talks to another: in clinical terms, keeping familiar abbreviations such as HFrEF, eGFR and DOAC as they are, and never explaining what a doctor already knows.

Decision trees are drawn like guideline algorithms, with colours that follow clinical convention and always come with a legend.

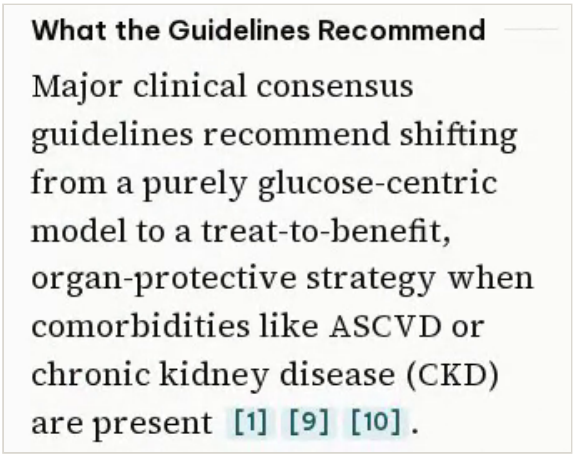

Figure 3. A PrimaCite answer: clinical terms in the headings. Real product screenshot, captured 2026-10-08.

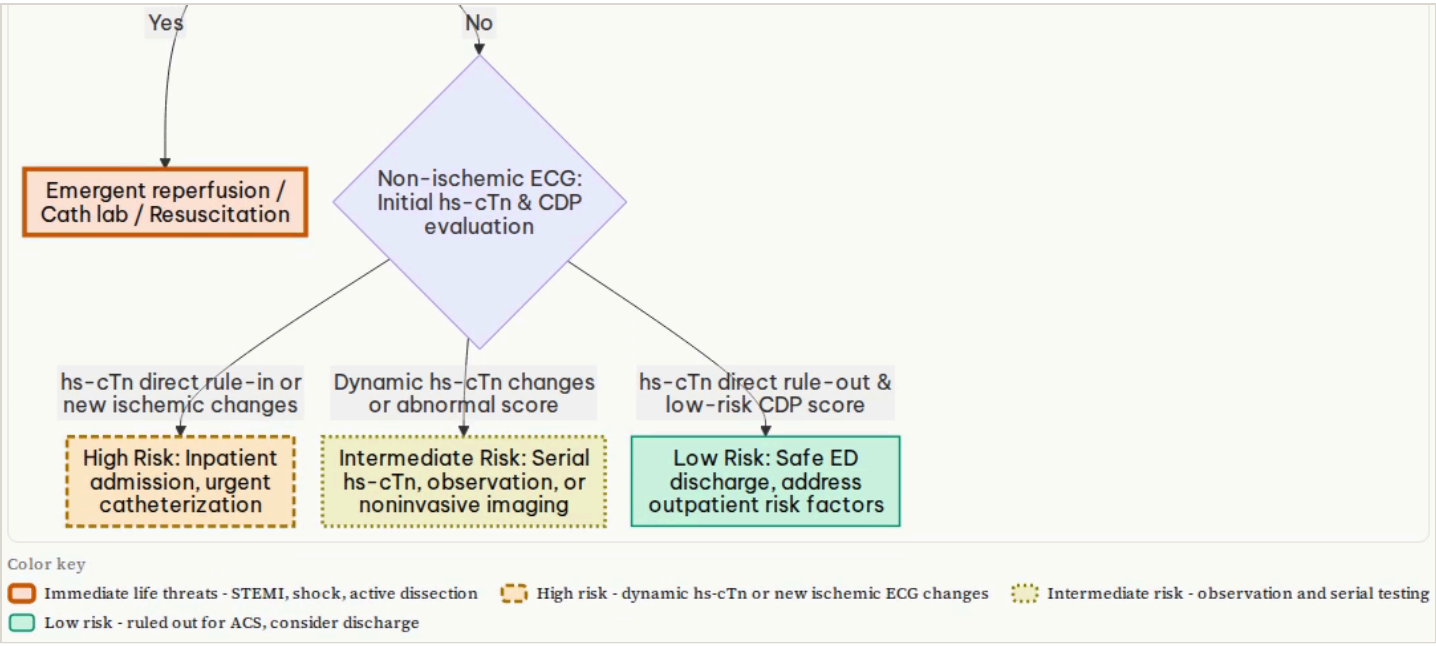

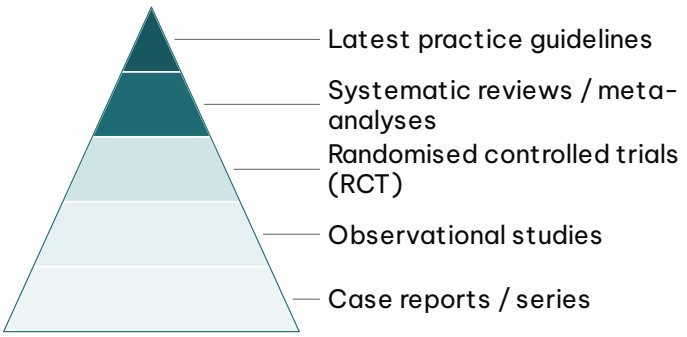

Figure 4. A diagram of the cited guidelines, coloured by urgency. Real product screenshot, captured 2026-10-09.

Evidence, not guesswork.

The answer, with its sources open beside it.

PrimaCite looks at the question from several angles, searches thoroughly for evidence with its own search method, then ranks the documents by level of evidence. Every citation is numbered and leads to the exact passage in its source.

PrimaCite is built on four components: evidence retrieval, ranking sources by level of evidence, verifiable citations, and, on a dedicated hospital deployment, the hospital's own institutional knowledge.

- Evidence retrieval
- Sources ranked by level of evidence
- Verifiable citations
- Your hospital's own knowledge (dedicated deployment)

Real questions from doctors and pharmacists

Pilot questions, personal details removed

Latest guidance
What is the latest international and Vietnamese guidance on EPA dosing for dyslipidaemia?

From case to guidance
Man, 50, hyperlipidaemia; multislice coronary CT angiography shows an unstable plaque causing 25% LAD stenosis. What do current guidelines recommend for lipid-lowering therapy and LDL-C targets?

From case to guidance
Man, 76, acute gout flare while on febuxostat 40 mg/day: what do current guidelines recommend?

Drug information
Ceftriaxone vs cefoperazone in mild hepatic impairment: pharmacokinetics and beta-lactamase stability?

Literature review
Write a literature review on recurrent pancreatic pseudocysts after transmural drainage.

Lectures
Build a 20-slide PowerPoint lecture with references at the foot of each slide.

For your hospital

HIS integration: time saved inside the clinical workflow

- ✓ One click from the HIS: signed in, case report attached
- ✓ Quickly ask about the case without retyping: what do current guidelines recommend?
- ✓ Quick drug information look-up: dosage, side effects, interactions, with citations
- ✓ Right inside the HIS screen, no switching applications

A pilot at your hospital

During the pilot, PrimaCite and your hospital assess five criteria before a wider rollout.

- ✓ Citation accuracy
- ✓ Citations that truly support the claim
- ✓ Finding the latest guideline
- ✓ Proportion of important evidence missed
- ✓ Security of patient data and internal documents

Limitations

PrimaCite supports searching, synthesising information and drafting documents. It is not for diagnosis or treatment, and it does not replace the physician's clinical judgement.

Like other AI systems, PrimaCite can still be wrong. Use it with care and check the cited sources. The clinical decision remains the doctor's responsibility.

In a hospital deployment, patient identifiers can be removed before PrimaCite processes a question.

Try it and share your feedback

To try it, go to primacite.com or scan the QR code beside this with your phone, then ask PrimaCite. Please leave out anything that identifies a patient.

We would very much welcome your feedback on PrimaCite: its strengths, its weak points, and the features it should add or do better. Reply to the person who sent you this, or use the feedback button in the app.
